

Question 32 (a)

(i) Arms are shorter than legs.

(ii) Australopithecus afarensis had shorter legs than ares which meant that it couldn't get away as quick unlike Homo sapiens.

(b) (i) I would read information about it in a biology book.

(ii) I would go over the information very carefully.

(c)

d) - Skulls - in these primates the skulls are all different in there own way. humans skulls are alot smaller compared to Ares and Aps are alot bigger compared to monkeys and prosimians. Spines -

The Monkeys and Apes have a Curved spine not like humans. humans have a Straight<sup>?</sup> spine that can curve when we move. Apes have a arched spine all the time that's why they walk on ~~two~~ 4 legs. Most of <sup>the</sup> time
