Ques	tion 24 (10 marks)									
The f	following information refers to inflation.									
	The Consumer Price Index (CPI) increase quarter, after rising by 0.3% in the Septe over 2001	•								
	However, the outlook for the medium term determinants of inflation has not changed substantially in the light of recent data. Wage and labour cost growth remain contained and are likely to continue to be so given the prevailing weakness in the labour market. The stability of the exchange rate over the past year, combined with downward pressure on world prices from the subdued global economy, suggests that there will be little inflationary pressure from import prices in the medium term.
