Factors that affect ecosystems can include pollution, such as noise air & rubbish. Tourism can also affect ecosystems due to sewage & waste disposal also degradation from hotels.

The Great Barrier Reef is affected by tourism & the pollution they cause. The water pollution is caused from people who don't dispose of things properly. Also cars that have oil leaks & then run into drains gets taken out to the ocean. The effect that humans have caused on the environment affects the water temp & there for kills coral. Like at Côn Phương National park tourism is causing the soil to erode & exploiting roots of trees.
