Question 23.

(a) The should consider:

- ~~The~~ technical feasibility- can it be done or technically be delivered?

- Economical feasibility - do they have enough fundings to deliver the system?

- Organisational feasibility - does it fit into the task or the organisation ~~they~~ that requires it?

- Schedule feasibility - can the system be delivered in the given time frame?

(b) Data accuracy and integrity of data.

   Is the data provided accurate and correct? Because this system provides services to the student the information provided should be accurate ~~for~~ their educational purposes, thus a lot of research and confirmation work is needed to be done before a text is loaded onto the website and the issue of "who is responsible for incorrect data?" also needs to be consider thus a DISCLAIMER warning should be posted up.

            PTO.

- PRIVACY ISSUES

Because fees are collected on line, thus credit cards and other personal payment details needs to be kept confidential (such as address, phone number, etc.)

- DATA SECURITY

The database needs to be secure probably through encryption of data transferred as credit card numbers are being dealed with, along with other personal information.

- COPYRIGHT

do the authors of the site have perf permission to post the information on the internet? Is the data being acknowledged to the appropriate persons?

- The appropriate usage of the website, is the website promoting or aiding any wrongful acts such as cheating in exams or posting answers to exams?
