Question Number: **21**

(a)

Digital camera → Digital image details → (Image & Info Infringement)
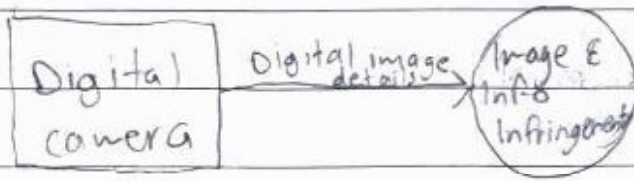

(b) Hardware   Software

- Digital Camera   - Digital imaging application

(c) This method of converting from the existing system to the new system is pilot conversion. Pilot conversion involves trialling the new system in a small part of the organisation, is fed back by the participants, and then is implemented to the new system. In this case, trialling the new system involves installing the first digital camera in one location, and will be fed back to the participants if it proves to be successful. If it is successful, implementation of the new system will involve rolling out the digital cameras across the state.

(d) An ethical issue related to the digital red light/speed camera is privacy. Privacy is a major concern in this system, where driver vehicles are being taken by digital cameras, showing their license plates, and these personal details are loaded directly into the infringement processing system where drivers don't even know happens. This also relates to freedom of information of the driver.
