Question Number: **23**

a. The use of Boolean data entry can reduce data entry methods as a Boolean data entry field is a simple yes/no question. Therefore, Boolean data entry is extremely easy to use, and difficult to make mistakes with.

b. The developers have used the screen elements to questions 3 and 7 to enable the user to visualise the question they are being asked. This makes it simpler for someone to use, as generally it is easier to work with visual elements then do work with pure text, which can sometimes become confusing

c.

Carbon Footprint Calculator

My Footprint

Household Total | Australian Average | My Footprint | Transport Total | Australian Average | My footprint

d. The Carbon Footprint Calculator has analysing processes in order to analyse the information that has been collected. After collecting the information you have supplied to the website, as well as processing and organising, it analyses the information you have given and generates information from it, during this process it could match information to predetermined figures for each question, and the analysing process does this for the other processes.
