c) The increase in the access to technology will undoubtedly effect the patterns of work & leisure in the future. Work will be made easier, with less human involvement and ~~less to less~~ leisure will become more accessible at the macro level.

Overtime, work has become less focused on individual interaction and has moved towards ~~to~~ the interaction with technology. For example, it is becoming increasingly common for people to work from home, as the internet provides as a global network for production and interaction. The individual is able to work to the same standards, therefore increasing leisure time and efficiency. As access to devices, such as the internet is increasing, the future of work is looking at becoming centered around

the use of technology, rather than face to face interaction.

The impact of technology on leisure has been an increase in leisure activities, and the simplification of leisure. The internet allows individuals an endless range of activities to participate and engage in. Instead of joining a soccer team, one can play online soccer with people from all over the world. Leisure time is spent differently, due to access to technology, where the importance of ~~the~~ inclusive family leisure activities is becoming less important, and participation in the global technological community is increasing in value.

In the future, work and leisure time will ~~be~~ be spent differently to the present. Access to technology and the advancement of technology will effect the patterns of work and make

Additional writing space on back page.

Leisure time more accessible.

You may ask for an extra Writing Booklet if you need more space.
