c) Technology has strongly impacted leisure and work over the past 7 years enabling people to work from home, this 'work from home' has become a phenomenon as many vast large companies have looked into and tried it out.

This link between work and leisure has given people the strength and power to combine both their work and leisure in one, thanks to technology, giving the power to do so.

This power gives virtually anybody the power to work from home, combining your leisure space with work.

Technology has impacted the change between work and leisure dramatically by being able to combine the two. For example; email, email through mobile phones, electronic devices, smart boards, computers, 'webcams', these are all the fundamentals of change between old work and leisure and new. The old consisted of going to the workplace for hours, working then going home to leisure time. However due to the technology, people are able to receive work via email while having leisure time.

Leisure has now changed to a non-physical version of communication with other human beings. Social networking sites for example, Facebook, have added users to ~~general~~ communicate with other

things through the internet rather than seeing them face to face. This has created a heavy change in leisure as well as work.

In the not so distant future, it is said by media that "Technology will take over the world, with children not learning how to write, and relying on technology," this explains how vast technology is and how it is set to impact work and leisure along with ALL beings, with future reference, ~~and~~ by the way technology is advancing nowadays, it is soon to be said that ~~there~~ there is no longer a specific 'work place' as many or all workers will be home based, leaving not a large difference or barely any difference between work and leisure conveying how technology would impact the world sooner than we think.

It is also feared that with ^{these} ~~this~~ advancements and increases in technology, it is feared that soon it will impact the adolescent audience and create a ~~s~~ learning barrier for the children. Technology will be completely controlling when children grow up and enter the work force, enabling them to working from home, combining work with leisure. Soon, when children grow up and enter the workforce

Additional writing space on back page.
pro

that they will be using technology constantly, relying on it when in work or while during leisure time (even if the times are joint) conveying how strong the impact of technology is in the future.

You may ask for an extra Writing Booklet if you need more space.
