    ENDIF

    ENDWHILE

ENDIF

IF Found <> true THEN

    DISPLAY "Not found"

ENDIF

END Inventory

b) Intrinsic or technical documentation should be used when the algorithms and source code are started to be written. ~~o~~ During planning and design stage where the structures of 'code' to be written are worked out. The use of remarks and general comments on particular lines of code, sub programs and modules are useful in later stage. Maintenance stage required updates on the software and that's the time where these remarks and comment are invaluable.

Programmers ensure of certain section of code can quickly read and understand the information provided by the remarks

User documentation developed during implementation stage helps the user understand how the software operates. Once a solution has been implemented and working, the end user must be able to operate it through user manuals, installation guide
