

Section 2 Question 22

a) i) Outsourcing is when a company or business employs someone from outside of their company to help develop part of or all of the current project. They hire someone for just that project instead of hiring them for a full time position.

ii) When you decide to outsource for a project in your company you would normally construct a contract with the person or company you are hiring. The contract should outline what they are required to do, how they will be paid and the amount of time they will be required for. Outsourcing allows a company to complete a project without having to

hire or retrain new permanent staff.

iii) First you must clearly outline your wants and needs so that you are sure that you are getting what you want.

allow the company you have hired to tell you what they need. Clearly development rules and boundaries. Insure that you are not rushing development as it might lead to unreliable systems.

Have the worked checked thoroughly to make sure there are ~~not~~ no errors.

bi) $\bullet \rightarrow$ is a constant variable

$\circ \rightarrow$ is a variable that continually changes.

ii) The error occurs in this part of the algorithm

" WHILE NOT CardInSlot "

the algorithm should read

WHILE CardInSlot

READ cardslot

IF Card is located in cardslot THEN

CardInSlot = True

ENDIF

ENDWHILE

iii) AcceptCardDetails (Customer Number, stored password)

AcceptAndValidatePassword (stored password, Validated)

IF Validated = True THEN

AcceptMenuChoice (Validated, CustomerNumber)

ELSEIF Validated = False Then

NotAcceptMenuChoice (Unvalidated, Customer Number)

Display "incorrect pin"

ENDELSEIF

ENDIF

IF Validated = False (3) Then

Display "card declined"

ENDIF
