

Start here.

b) An automotive workshop can be noisy. cars going, ~~the~~ grinders, air tools etc all make allot of noise. They deal with this by having a area where noise is assolated and if they don't to workers should wear ear protection.

They deal with air quality by make extraction fans. The fans take most of the gas out of a ~~big~~^{small} area and put it in a bigger area. Or you have good air flow.
